**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 7-9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thomas et al (US 6,271,514 B1).

Thomas et al discloses a laser scanning unit (Fig. 2) comprising a laser (211), a collimator (column 6, lines 7-9), and an Fsin $\theta$  lens (column 4, lines 25-30), a micro electronic mechanical system (MEMS) oscillatory mirror that is being disposed between said collimator and the lens (column 4, lines 18-22) wherein the collimator directly projecting the parallel beams onto the oscillatory mirror (see the rays in Fig. 2), the oscillatory mirror directly reflecting the parallel beams into the lens, the oscillatory mirror oscillating in harmonic motion at regular oscillating amplitude and controlling a direction the parallel beams are reflected onto the lens thereby providing a

linear scanning (inherent see rays leaving 252). MEMS oscillatory mirror is located adjacent to the collimator (see Fig. 2) and the  $F\sin\theta$  lens has a parameter matching the harmonic motion of the MEMS oscillatory mirror (inherent).

The laser of Thomas et al is not semiconductor laser. It would have been obvious to one of ordinary skill in the art to use a semiconductor laser because it is readily available in the scanning art and choosing readily available technology would be within the level of ordinary skill.

#### ***Response to Arguments***
